Figure S3. Gene induction in brains after VSV or EMCV infections. **A**, mRNA levels of select genes in brains (without OBs) of uninfected or intranasally VSV-infected wt and *Ifit2*−/− mice at 6 d.p.i., plotted as mean+SD; n=3 mice per infected group; infection was intranasal with 4x10^2 pfu of VSV. **B**, mRNA levels of select genes in brains (without OBs) of uninfected or intracranially VSV-infected wt and *Ifit2*−/− mice at 24 h post injection, plotted as mean+SD; n=4 mice per infected group; infection was intracranial injection with 10 pfu of VSV. **C**, *Ifit2*, *Ifit1*, *IFN-β* and EMCV RNA levels in brains 4 days after EMCV infection (5x10^2 pfu, n=3 mice per infected group).
